

# Introduction to Objects Exercises

---

This exercise is made up of thirty small coding problems. Each problem is independent of the others, and may be solved in any order.

**Note, If you find yourself stuck on a problem for longer than fifteen minutes, move onto the next, and try again later.**

Java source code has been provided for you in this repository. Import the code as an existing Maven project into your Eclipse workspace.

The project has two Java files, Exercises.java, and ExercisesTest.java. The ExercisesTest.java contains JUnit tests for each of the coding problems. There is no need for you to do anything with this file other than to "Run As JUnit Test" inside Eclipse. The tests will verify the correctness of your solution code.

More instructions go [here](#).

**If you have any questions, or concerns, please see one of the instructors.**
